

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Team ID	PNT2022TMID44028
Project Name	Project – Natural Disasters Intensity Analysis and Classification using Artificial Intelligence

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Access to the location	Turn on the location.
FR-4	Input	Video feed from the camera.
FR-5	Processing	Processing the images and videos based on the available datas.
FR-6	Output	Alerts about the intensity of the disaster.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR1	Usability	Can be used if there is proper internet connection and input.
NFR2	Security	Users must change the initially assigned login password immediately after the first successful login. Moreover, the initial should never be reused.
NFR3	Reliability	Gives accurate information and can be used anytime.
NFR4	Performance	Good user experience and ease of operating the application. Latency is very low.
NFR5	Availability	The application is available all the time and can be accessed at anytime.
NFR6	Scalability	Assesses the highest workloads. The application is scalable enough to support 1,000,000 visits at the same time while maintaining optimal performance.
